FOR SMALL & MEDIUM BUSINESSES

Protect your business where phishing *actually succeeds.*

SafeToOpen protects your team in **the inbox and the browser** — before phishing becomes business loss — for a few dollars per person each month.

- ✓ Set up in under 30 minutes
- ✓ Works with Microsoft 365 & Google Workspace
- ✓ Keeps your existing antivirus & filtering
- ✓ Nothing to host or maintain

1 in 5

small businesses suffered a cyberattack in the past 12 months

Hiscox Cyber Readiness Report

> *Modern phishing doesn't beat your firewall. It convinces your team.* ***SafeToOpen protects that moment.***

THE RISK

Phishing reaches your team — with or without email filtering.

- **Phishing comes from everywhere**
  Unsafe links reach your team via email, texts, social media, search, and AI chats — whether or not you have email security in place.
- **New scam sites beat the filters**
  Most phishing sites live under 24 hours (Interisle 2024) — gone before blocklists catch up.

WHAT YOU LIKELY HAVE TODAY	COVERED?
Microsoft 365 / Google Workspace	✓
Antivirus & backups	✓
Browser & inbox protection — SafeToOpen	★

WHAT YOU GET

Choose Browser, Email, or both.

PRODUCT 1 — $5 /user/mo

Browser Protection

Stops phishing, fake websites and credential theft inside the browser.

- ✓ Malicious links & zero-day phishing sites
- ✓ Credential theft, risky pastes & downloads

PRODUCT 2 — $4 /user/mo

Email Protection

Scores every email Safe, Caution or Dangerous — with reasons — before anyone replies, clicks or pays.

- ✓ Impersonation & Business Email Compromise
- ✓ Payment fraud, QR codes & attachments

BUNDLE & SAVE

Browser + Email = $7 /user/mo

- ✓ One platform · one monthly invoice · cancel anytime

SIMPLE MATH

Simple per-user pricing that pays for itself

WHAT IT COSTS YOUR TEAM	
Team of 10 — both products	**$70 / month**
Team of 25 — both products	**$175 / month**
Team of 50 — both products	**$350 / month**

A single prevented fraudulent payment can cover years of protection.

NO SECURITY TEAM REQUIRED

The expensive part of security isn't the software — it's the people required to act on what it finds. Prevention doesn't create that work: when a fake sign-in page is blocked before the password is entered, there are no credentials to reset and no customers to notify.

A receipt for something that didn't happen — not a ticket someone has to work.

TRUST & PRIVACY

- ✓ ISO/IEC 27001:2022 certified · GDPR compliant
- ✓ Content analyzed in transit — never stored
- ✓ No browsing history collected

GET PROTECTED

Book a 20-minute business security review.

- ✓ Browser, Email, or both
- ✓ Setup supported by SafeToOpen
- ✓ No infrastructure changes
